CRYPTON SAFE - FROSTBOX

Numerous researches show that most people are incapable of showing a strong will to hold a cryptocurrency for a long time. At any negative events, people immediately run to sell cryptocurrency in panic. And this is the most important reason of funds loss.

1. Description

However, we have figured out how to avoid this. We just need to left the role of cryptocurrency custodian to an unemotional gatekeeper - a program. A special algorithm encrypts your crypto wallet with coins for a specified period of time. And you can get these coins back only after this term expires. This solution solves several problems at once.

2. Problems solution

- One of them is a described earlier - the panic sale.

- The other is that your coins won't be lost if your PC crashes. Also, it will be impossible to steal them.

- And also a non-obvious, but very important advantage - using this service we contribute to the reduction of the circulating supply of CRP, which will inevitably lead to an increase in its price. (Look at BTC, there are only 30% circulating, 70% is lost).

3. Options

The service offers two options for freezing coins: with the use of your PC (offline) and without it (online).

- Offline Freeze: You need to create a new Utopia account, transfer your coins into it. After that you need to set freezing time and freeze your .db file with our special program. As a result, you get an encrypted file of your wallet, which cannot be decrypted before the time specified by you.

- Online Freeze: it is almost the same, only all your actions will be reduced to a minimum. All you need to do - is to send your coins to safe unique CRP address, set the decryption date and specify the address to which you will be sent back the CRP after the decryption date.

As soon as the .db file is encrypted, you can do with it whenever you want. (Applicable only for offline option). We suggest you to make multiple copies of the file and store them in different locations.

When the time expires, you will need an internet connection so that the encoder can verify that the time has actually elapsed. **ATTENTION!** There is really NO any way to decrypt your wallet until the date is gone. So pick the date wisely.

4. Scheme

User → CRP FROSTBOX → Offline Freeze → Downloaded Encryptor

Online Freeze

CRP

New Utopia account .db

Set Freeze time

CRP — Time is up — CRP

Set Freeze time

CRP — Time is up — CRP
